

Medication

EYFS: 3.19, 3.46, 3.47

At Radnor Park Kindergarten we promote the good health of children attending nursery and take necessary steps to prevent the spread of infection (see Sickness and illness and Infection control policies). If a child requires medicine, we will obtain information about the child's needs for this and will ensure this information is kept up to date.

We follow strict guidelines when dealing with medication of any kind in the nursery and these are set out below.

Medication prescribed by a doctor, dentist, nurse or pharmacist

(Medicines containing aspirin will only be given if prescribed by a doctor)

- Prescription medicine will only be given when prescribed by the above and for the person named on the bottle for the dosage stated
- Medicines must be in their original containers with their instructions printed in English
- Those with parental responsibility for any child requiring prescription medication should hand over the medication to the most appropriate member of staff who will then note the details of the administration in the medicine book and another member of staff will check these details
- Those with parental responsibility must give prior written permission for the administration of each and every medication. However, we will accept written permission once for a whole course of medication or for the ongoing use of a particular medication under the following circumstances:
 1. The written permission is only acceptable for that brand name of medication and cannot be used for similar types of medication e.g. if the course of antibiotics changes, a new form will need to be completed
 2. The dosage on the written permission is the only dosage that will be administered. We will not give a different dose unless a new form is completed
 3. Parents must notify us **IMMEDIATELY** if the child's circumstances change e.g. a dose has been given at home, or a change in strength or dose needs to be given
- The nursery will not administer a dosage that exceeds the recommended dose on the instructions unless accompanied by written instructions from a relevant health professional such as a letter from a doctor or dentist
- The parent must be asked when the child has last been given the medication before coming to nursery and the staff member must record this information on the medication book. Similarly, when the child is picked up, the parent must be given precise details of the times and dosage given throughout the day. The parent's signature must be obtained at both times
- At the time of administering the medicine, a senior member of staff will ask the child to take the medicine, or offer it in a manner acceptable to the child at the prescribed time and in the prescribed form. (It is important to note that staff working with children are not legally obliged to administer medication)
- If the child refuses to take the appropriate medication, then a note will be made on the form
- Where medication is 'essential' or may have side effects, discussion with the parent will take place to establish the appropriate response.

Non-prescription medication *(these will not usually be administered)*

- The nursery will **not** administer any non-prescription medication.
- The nursery will only administer non-prescription medication if the child has a temperature that exceeds 38.5 or has had a wasp / bee sting. The parent will be contacted straight away and be asked to collect their child. If the parent/s is unable to collect their child immediately the medication (calpol) will be administered as precautionary measure.
- If the nursery feels the child would benefit from medical attention rather than non-prescription medication, we reserve the right to refuse nursery care until the child is seen by a medical practitioner
- On registration, parents will be asked if they would like to fill out a medication form to consent to their child being given a specific type of liquid paracetamol or antihistamine in particular circumstances such as an increase in the child's temperature or a wasp or bee sting. This form will state the dose to be given, the circumstances in which this can be given e.g. the temperature increase of their child, the specific brand name or type of non-prescription

medication and a signed statement to say that this may be administered in an emergency if the nursery CANNOT contact the parent

- An emergency nursery supply of fever relief (e.g. Calpol) and antihistamines (e.g. Piriton) will be stored on site. This will be checked at regular intervals by the designated trained first aider to make sure that it complies with any instructions for storage and is still in date
- If a child does exhibit the symptoms for which consent has been given to give non-prescription medication during the day, the nursery will make every attempt to contact the child's parents. Where parents cannot be contacted then the nursery manager will take the decision as to whether the child is safe to have this medication based on the time the child has been in the nursery, the circumstances surrounding the need for this medication and the medical history of the child on their registration form
- Giving non-prescription medication will be a last resort and the nursery staff will use other methods first to try and alleviate the symptoms (where appropriate). The child will be closely monitored until the parents collect the child
- For any non-prescription cream for skin conditions e.g. Sudocrem, prior written permission must be obtained from the parent and the onus is on the parent to provide the cream which should be clearly labelled with the child's name
- If any child is brought to the nursery in a condition in which he/she may require medication sometime during the day, the manager will decide if the child is fit to be left at the nursery. If the child is staying, the parent must be asked if any kind of medication has already been given, at what time and in what dosage and this must be stated on the medication form
- The nursery DOES NOT administer any medication unless prior written consent is given for each and every medicine.

Teething Gels

There is a lack of evidence that teething gels are effective. Teething gel contains a mild local anaesthetic and are only available from pharmacies. The kindergarten will NOT administer any teething gel but will try to sooth babies' gums using raw fruit and vegetables such as melon. We can use teething rings (when supplied by parents) cooled in the fridge to help soothe babies' gums. Please note we never put teething rings in the freezer, as it can damage a baby's gums.

Injections, pessaries, suppositories

- As the administration of injections, pessaries and suppositories represents intrusive nursing, we will not administer these without appropriate medical training for every member of staff caring for this child. This training is specific for every child and not generic. The nursery will do all it can to make any reasonable adjustments including working with parents and other professionals to arrange for appropriate health officials to train staff in administering the medication. For children with long term medical requirements, an Individual Health Care Plan from the relevant health team will be in place to ensure that appropriate arrangements are in place to meet the child's needs.

Staff medication

All nursery staff have a responsibility to work with children only where they are fit to do so. Staff must not work with children where they are infectious or feel unwell and cannot meet children's needs. This includes circumstances where any medication taken affects their ability to care for children, for example, where it makes a person drowsy.

If any staff member believes that their condition, including any condition caused by taking medication, is affecting their ability to care for children they must inform their line manager and seek medical advice. The nursery manager will decide if a staff member is fit to work, including circumstances where other staff members notice changes in behaviour suggesting a person may be under the influence of medication. This decision will include any medical advice obtained by the individual or from an occupational health assessment.

Where staff may occasionally or regularly need medication, any such medication must be kept in the the lockable cabinet in the administration room or a separate locked container in the nursery room where staff may need easy access to the medication such as an asthma inhaler. In all cases it must be stored securely out of reach of the children, at all times. It must not be kept in the first aid box and must be labelled with the name of the member of staff.

Storage

All medication for children must have the child's name clearly written on the original container and kept in a closed box, which is out of reach of all children all sections have a lockable medicine box.

Emergency medication, such as inhalers and EpiPens, will be within easy reach of staff in case of an immediate need, but will remain out of children’s reach. Any antibiotics requiring refrigeration must be kept in a fridge inaccessible to children. This lockable medicine fridge is in the administrators office with the child’s name clearly written in the original container.

All medications must be in their original containers, labels must be legible and not tampered with or they will not be given. All prescription medications should have the pharmacist’s details and notes attached to show the dosage needed and the date the prescription was issued. This will all be checked, along with expiry dates, before staff agree to administer medication.

Medication stored in the setting will be regularly checked with the parents to ensure it continues to be required, along with checking that the details of the medication form remain current.

Refusal of medication

If a child refuses to take medicine, staff must NOT force them to do so. The refusal should be recorded, and parents notified. If the child spits out or is sick after taking medicine, another dose will NOT be given and the parents will be contacted. If any further concerns arise the parent/carers will be notified.

If staff have any concerns related to administering medicine to a particular child, the issue will be discussed with the parent/carers.
